IN THE SPECIFICATION:

Please amend the specification as follows.

Please replace the paragraphs on page 39, lines 10-17 with the following amended paragraph:

A CIM model enables overall management information in a network/enterprise environment to be described. CIM comprises a Specification and a Schema. The Specification defines the details for integration with other management models, while the Schema provides the actual model descriptions. ~~More details of CIM can be found, for example, at http://www.dmtf.org/standards/standard_cim.php.~~ The CIM schema can model physical and logical entities, as well as associations (for example "realized by" associations) between logical and physical entities. In other words, a logical entity can be realized by a given physical entity as represented by a realizes association.

Please amend the title as follows.

A Management Object Model for Performing Management of a Computer ~~Management~~ System
